EDUCATION

Bachelor of Science, Computer Science - Cybersecurity Track
University Of Maryland, Baltimore County (UMBC)

December 2022

Relevant Coursework: Network Security, Operating Systems, Malware Analysis, Computer Security, Computer Networking, Databases

CERTIFICATIONS

CompTIA A+ Certification

March 2026

TECHNICAL SKILLS

Programming Languages:	Python, Java, SQL, JavaScript, HTML/CSS, C/C++
Backend Development:	Java, Spring Boot, REST APIs, JDBC, SQL, MVC architecture
Data Tools:	PostgreSQL, MySQL, SQLite, Redis
Other Developer Tools:	Docker Compose, Jira

SOFTWARE PROJECTS

Job Queue System - Redis + PostgreSQL, Spring Boot, Docker

January 2026

- Built a Spring Boot-based background job-processing system with Redis queues, scheduled retries (sorted sets), exponential backoff, and a Dead Letter Queue.
- Persisted job metadata and status (PENDING/IN_PROGRESS/COMPLETED/FAILED) in PostgreSQL to support monitoring and client polling.
- Deployed system locally with Docker Compose and verified successful handling of 20 queued jobs at once.

RecipeHub - Java, REST API, HTML, CSS, JavaScript

December 2025

- Built a full-stack web application with a browser-based frontend and Java REST API backend.
- Implemented support for CRUD operations, recipe search functionality, and structured integration between frontend and backend components.

Social Media Blog API - Java, SQL/JDBC, REST API, MVC Architecture

October 2025 – November 2025

- Designed a RESTful backend for a micro-blogging application, implementing user registration, authentication, and complete CRUD functionality.
- Structured the application using Controller, Service, and DAO layers to improve maintenance and error isolation.
- Utilized SQL and JDBC database operations and tested endpoints locally by verifying JSON responses, status codes, and persisted data.

WORK EXPERIENCE

Software Engineering Trainee - Revature, Remote (MD)

September 2025 – December 2025

- Built small automation scripts to accelerate development workflows, including data parsing, test data generation, and validation checks.
- Used AI-assisted tooling to draft test cases and edge inputs, then validate behavior with unit/API tests to ensure correctness.
- Prototyped simple rule-based detection for suspicious/invalid inputs, such as malformed payloads and unexpected parameter ranges, to harden API behavior.

Administrative Operations Assistant - Chesapeake Property Management, Owings Mills, MD

August 2025 - December 2025

- Handled a high volume of calls/emails from tenants and vendors.
- Triaged issues and escalated urgent maintenance requests while maintaining professionalism and confidentiality.
- Coordinated vendor scheduling and access logistics for repairs/inspections across 250+ properties.
